

1

WHAT IS NMT?

The Neurosequential Model of Therapeutics is a neuroscience-informed, developmentally-sensitive, approach to the clinical problem solving process.

It is not a therapy – and does not specifically imply, endorse or require – any single therapeutic technique or method.

NETWORK

2

The Neurosequential Model

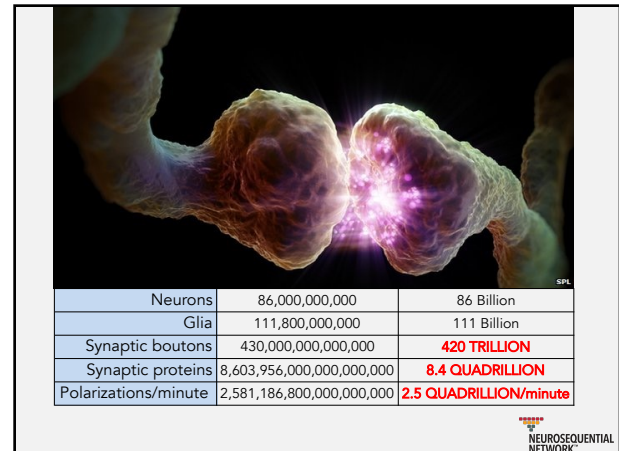

The brain mediates our thoughts, feelings, actions and connections to others and the world.

Understanding core principles of neuroscience, including neuroplasticity and neurodevelopment, can help us better understand ourselves and others.

NEUROSEQUENTIAL
NETWORK

3

4

The NMT is both an 'evidence-based' and an 'evidence-generating' practice.

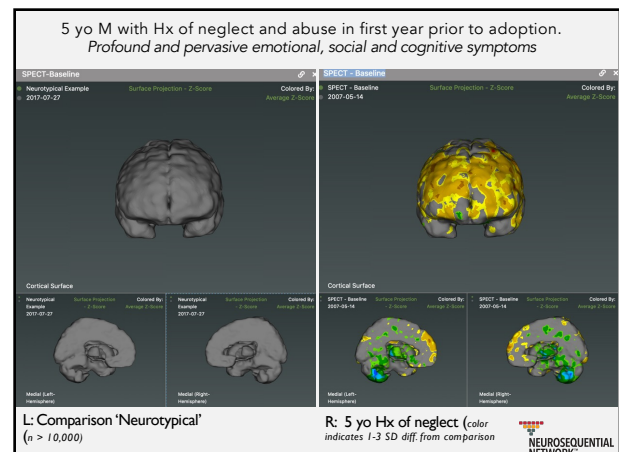

The web-based, standardized assessment elements allow the collection of aggregate data to facilitate the ongoing monitoring of a range of individual and program outcomes.

The model is designed to allow iterative modifications to improve program and treatment plan elements.

7

8

Activity-dependence & Neuroplasticity

The more a neural network is **"activated"** the more that network changes to reflect that pattern of activation. This **'activity-dependence'** is a core mechanism underlying development, memory and learning.

9

Equifinality & Multifinality

Equifinality is the understanding that many different pathways, or risk factors, may result in the same outcome. Multifinality is the understanding that a specific risk factor may result in a multitude of developmental outcomes (Cicchetti & Rogosch, 1996).

As any good clinician knows, a specific symptom (e.g., inattention, irritability, anxiety) can be caused by many different mechanisms (equifinality) and that a specific experience (e.g., traumatic event) can cause a host of different clinical outcomes (multifinality).

10

The Neuroarchaeology of Experience and the Neurosequential Model

The age at which an experience (e.g., an adverse event) takes place will determine the neurodevelopmental impact and the resulting functional consequences. Therefore, a developmental history of the timing of adverse experiences (*as well as positive, attenuating experiences*) is crucial to understanding current functioning. The NMT includes a developmental review of adverse experiences and the buffering effects of relational health ('connectedness').

11

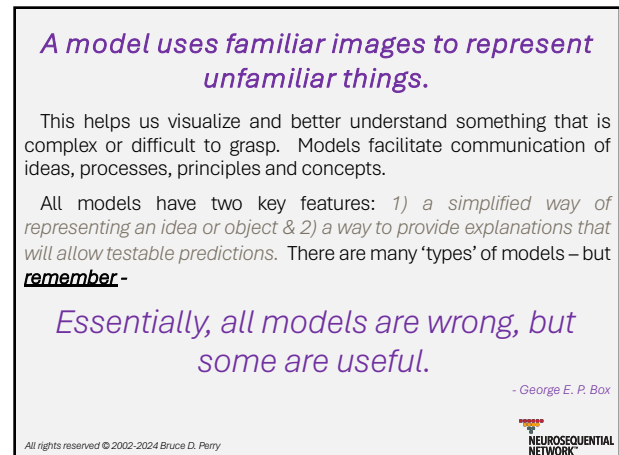

"You never change things by fighting the existing reality. To change something, build a new model that makes the existing model obsolete."

- Buckminster Fuller

Don't be afraid of 'Stress'
"I ain't afraid of no stress."

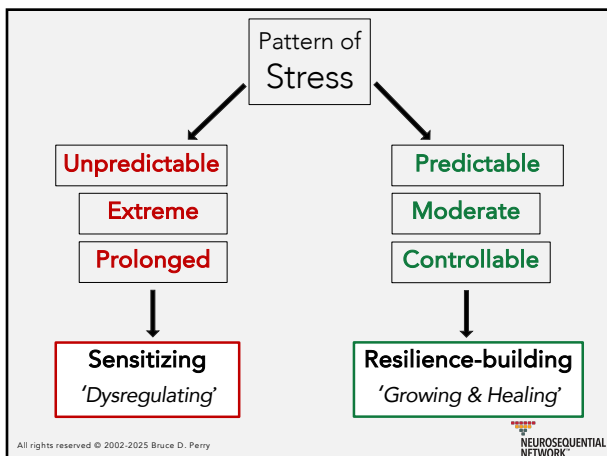

Stress is a merely a demand on one or more of our body's many physiological systems; hunger, thirst, cold, working out, a big project at work – are all stressors. *Our body has a host of 'stress-response' capabilities that help us manage these challenges and keep us in 'equilibrium.'*

Stress is essential to healthy development, and it is the essential element of building resilience.

The key factor in determining whether stress is positive or destructive is the pattern of stress.

NEUROSEQUENTIAL NETWORK™

Primary Modes of Regulation

Self-regulation (SR)
 Self-soothing – using somatosensory (SS: bottom-up)
 Cortical regulation – cortical modulation (CM: top-down)
 Dissociation

Mutual somatosensory regulation (SS-M)
 Self & Other (e.g., dancing, rocked by parent)

Relational regulation (Rel)
 Positive co-regulation (Hx of positive primary relational template)
 Co-dysregulation (State-dependent & tied to Hx of early relations)

Pharmacological regulation (Rx)

Optimal regulatory interactions use “multiple” pathways
 SS and Rel
 Cort and SS
 Diss and SS

THE NEUROSEQUENTIAL MODEL

Humans are complex – individually, in families, communities, cultures and across generations.

Overly simple constructs – including the Neurosequential Model – do not capture the depth and breadth of the human experience.

NEUROSEQUENTIAL NETWORK

45

The Neurosequential Model

Each person has a unique pathway to the present and deserves individualized care.

"One-size fits all" approaches rarely meet the needs of the individual – more often they meet a need of the provider (or system).

NM is not "On the Shelf"

86% of clinical research is never used in direct patient care
(Balas & Boren, 2000)

It takes ~17 years for the 14% of research that does influence practice to get there!
(Morris, Wooding & Grant, 2011)

NMT was first manualized in 2008 (NMT Certification: 3 levels)
NME was first manualized in 2012 (NME Training: 3 levels)
NMC was manualized in 2020 (NMC Trainer Certification)
NM Sport was manualized in 2021 (NM Sport Phase 1 Certification)

Since 2008,
 100,000 NMT metric reports
 100,000 NME "mini-map" reports
 6000 + NM (NMT, NME, NMC & NM Sport) certified professionals
 600 + NMT or NME certified organizations
 28 countries

WHAT HAPPENED TO YOU?
CONVERSATIONS ON TRAUMA, RESILIENCE, AND HEALING
BRUCE D. PERRY, M.D. & OPRAH WINFREY
A BOOK CLUB GUIDE FOR PARENTS
Journey to Resilience: From Trauma to Healing
CHILDREN'S ALLIANCE

INTRODUCTION TO THE BOOK CLUB CONCEPT

After a long day of work, the brain needs to rest and recharge. It's a natural process that allows the brain to process the day's experiences and store them for future use. This is why it's important to have a quiet time to reflect on the day's events and to rest the mind.

The book club concept is designed to help parents and children understand the brain's response to trauma and how it affects behavior. The book club is a safe space for parents and children to discuss the book's content and to share their own experiences. The book club is a great way to build a strong relationship between parents and children and to help children understand their own behavior.

OBJECTIVES

- Empower families to discuss needs of themselves and their community
- Foster development of a strong sense of community
- Create a safe space for children and adults to discuss their own experiences
- Empower parents and children to help each other feel supported
- Foster a sense of connection between parents and children
